

## 7W Education system and 7<sup>★★★★★★</sup>-Star Schools

<http://3d.edufuture.biz>

How to create the Future Education System in reality?

1. We introduce a project of 7<sup>★★★★★★</sup>-Star School Network, where the best education technologies will be implemented: top winnovative methods, modern content and curriculum, progressive teachers-coaches, motivate learning design, creative environment and futuristic architecture, international links, financial profitability, champion graduates results and attractiveness of the world.

2. We predict that in the nearest future education will transform from millions schools-as-cells into several huge education platforms (A, B, C), that will offer different education products, and these platforms will compete which each other.

The situation will be the same as in phone industry, where there is a tough competition between Apple, Samsung, Xiaomi, etc. Our education platform 7W will outpace the rest competitors because of numerous advantages.

3. We understand where and how to invest:

- a) Main school cores (content, technologies, equipment, personnel)
- b) Environment (architecture design, interior, infrastructure, online, services)
- c) Speed and Usability of getting knowledge (combining school devices-tablets with education information, in order to get and deliver needed knowledge in less time and less expenses).

4. In 7W, there will work Think Tank (Winnovative Institute of Future, WIF), where the best educators, scientists and futurologists from the whole world will create new education content, technologies, equipment and trainings. All the students of different countries will have an access to these innovations by subscription. So the best education materials will spread quickly and directly.

5. Up to this moment, we have done significant job:

We began education reforms in Ukraine (750+ schools in Kiev' region), according to the 7W system. We created Knowledge Hypermarket ([www.edufuture.biz](http://www.edufuture.biz)), with attendance 4 million visits monthly from 58 countries, where everyone can find and use 2 Tb of lessons, cases etc.

6. We created the biggest collection of «cases» in the world, (more than 500) as a new education model of case-lessons, for the secondary schools. So, hundreds of thousands of students and teachers from 58 countries already use them. Moreover, there is a 10% increase of them every month.

7. We created a Project of 7\*\*\*\*\*-Star school, which shows absolutely new approaches to education. There is a business-plan of 7W School that gives ROI 5-7 years and 50-70% of profitability.

8. According to the formula: «The best from the Past + important from wherever + the main for the Future», we began to engage retired teachers to online teaching, and implement multicultural communications.

9. We researched an Education Market and discovered that most schools use old technologies because nobody decided how to implement education content into devices and how to combine knowledge data, software, cloud technologies and USB. And we got fascinating results.

Now we are on the way to solve this problem in order to receive all education materials in one place. It was a dream of all students and now this dream comes true.

10. We have an entire 7W Project that meets the main requirements and challenges of the 21-st century.

Thank you.
