

## Case Spreading Statistics

It took only a few months, and thousands of teachers in hundreds of schools (more than 600) prefer now to use case technology. Especially children like cases, because they find here all together: education and edutainment, knowledge and interesting presentation of the material, texts, formulas and visual applications.

Case lessons – is an innovative approach to learning, because in this way we can solve the main problem of school: how to combine theory with practice and knowledge with competencies.

What is motivated and progressive in Cases?

- They are attractive to the students, teachers, trainers and parents;
- They are considered the most advanced type of school classes;
- They received the support of progressive educational community;
- They have been approved as effective interdisciplinary scientific method;
- They are in line with the reform of the education system.

The methodology of Case-lessons is patented and has no analogues in the world. The effectiveness of cases confirms the modern trends in education. A growing number of schools, teachers and students accompany the development of case studies with their contributions of knowledge and data. So many wise people from different countries and cultures participate in creating cases. This gives unprecedented deep and fresh information and knowledge for schoolchildren.

Join us. Write to [info@edufuture.biz](mailto:info@edufuture.biz), and we will add your school to the interactive map that shows the geography of cases' extension. In addition, you are welcome to participate in the [Contest](#) for the best of cases using in your school, and join the [writing case studies on current topics](#).
